Introduction

What is this?

This is one of, if not the easiest way, that any person can make an income from the internet without website knowledge, without buying or selling in just minutes a day.

Make Money Selling Books, Tapes, CD's and Games!
World-wide shipping, credit card ready. Start Today!

Chapter 1
How does it work?

You can get a website ready made for you free of charge on the internet. Then by just clicking a button you can type about something you're interested in. The income is made when someone goes from your site to another and buys something.

This is possible because others want to sell their products. There are literally millions of people who pay handsomely for others to get them sales.
Don't worry you won't be doing any selling. Their own site will do that.

Shortly I'll clearly explain the easy, simple and highly effective way you get someone to go to these sites.

These other sites want people to attract buyers to their sites. They do this by running what is called affiliate programs.

How it works is that people like you and me go to their site and join their affiliate program for free. It's easy!

Then you get a special unique web address for their site. You put this as a link on your site.

Each time someone clicks this link they will be sent to their site. Because it's a special address the site knows the person has come from your site. So when they buy what they're selling

you get commission. This can be anything from 10% - 80%. Most sites offer 40% - 60%.

You'll be adding to your site regularly. As it only takes minutes there's no reason why you can't do it daily. As your site gets larger with more links the more income potential there'll be. It'll just get bigger and bigger every day.

So in this guide first we'll talk about what you need to write about to make it profitable and enjoyable.

Next, I'll be showing you how to get your own site for free.

Then, I'll show you how to easily find and join affiliate programs.

Next, very importantly, how you write and need to word it so people will want to go to these other sites and buy. Thereby making you money.

Finally, I'll be showing you the way that's clearly been shown as the winner for getting people to go to your site. It's free, like everything else you'll be doing.

Does it work?
You won't be the only person doing this. There are crowds of others already making their living with this strategy. Don't worry there's plenty for everyone.

There are people who have done it for a year or so and earning incredible figures. It just continues to grow the longer you do it.

So let's get started...

Advertise Your Products, Programs and Pets! Nothing happens until you advertise!
http://www.usfreeads.com/21128_refer.html

Chapter 2
Your passion is the key to enjoyable income

What are you interested in?

Football? Films? Photography? Fishing? DIY? Computers? Beauty? Keep fit?

Whatever your interest is you can make an income by following it.

I will be showing you how to get a free website built for you. On this website you will be writing up a little bit each day about what you know and

what you find related to your interest.
Then...

People out there who are selling
products related to your interest will
pay you when someone you refer buys
from them.

Why would they be willing to do that?

When people are wanting sales of
their products it all depends on getting
customers. It's up to them to get those
customers. But they're one person or
company. They realise that getting
thousands of other people sending
them customers means more profits
for them. However, no-one is going to
do that for nothing. So they pay
people commission in return for the
customers sent. They set up what's
called 'affiliate programs'.

How do they work?

Someone with a website will join their program and be given a unique link to their website. When someone visits their site by clicking the link they'll know who sent them. Then...

When they buy commission is paid to the referrer.

Later on I'll be showing you how easy it is to get these links. Free of charge.

For now, let's continue our discussion about your passion.
Here's an example...

Say your craze is about fishing.

You naturally already know plenty about your pet hobby. So you can write information to help others on your site.

One day, while searching the web, you come across a site where a brilliant fishing lure is for sale. Maybe you buy it yourself and find it's absolutely brilliant.

So on your site you mention it and say how brilliant you found it to be. Also you mention where on the web you can buy it. They click the link and go and buy. You guessed it. The link is your special affiliate link to their site. They buy it along with many others. Fat commission cheque heading your way I think.

But wait. The next time on your site you mention about a great book which tells you all these neat methods of catching fish. Again you put the affiliate link for this site up as well.

Each day by simply following your interest, when you find another good resource you mention it including an affiliate link.

See how this just gets bigger and bigger each day. And it's just doing what you already enjoy. Glad you bought this book now?

Here's another example...

My dad loves films. Just the latest films but old films. He particularly likes old British made movies.

So on his site he would write a lot about his favourite films and why he likes them. So on his web travels he finds a film he's been trying to find for a long time. He goes and buys it.

On his website he writes about this and says who at long last he's found a site where he's been able to get a copy. He then gets a unique affiliate link to the site which he places on the his site. Voila an income stream when anyone else goes and buys it as well.

Products he can make money from include films, membership sites, books, memorabilia, home movie systems etc.
The fitness person could mention good information about fitness and also recommend sites offering products such as...

health equipment, books, health pills, membership sites etc, etc.

Do not, however, just fill your site with recommendations and affiliate links. People will just find this boring and stop coming to your site.

You want people to keep coming to your site and perhaps even tell their friends about it. So give them a reason by including lots of valuable and interesting information. It's during the course of your information you can recommend these other resources.

So next we're going to go and get our free website...

Chapter 3
How to get your ready-made free website

Your website will be different to traditional sites but will look very professional. You'll be having what is known in internet jargon, as a blog.

So what is a blog? We won't go into technical details but basically it's your own website that you simply add to as and when you want.

Now what we're going to do first is go on the internet and have a look at a blog website.

Type this address into your favourite web browser, such as Internet Explorer or Firefox.

There are many more examples you can look at, but I picked this one because it's been going for quite some time. It's pretty much along the same lines as yours will look after some time.

All the design will be done for you. You'll have several different ones to choose from.

There are a couple of places where you can get a blog for free on the internet. However, the best one by far is called blogger.

So off we go to get your free website. Ready!

Type this address into your browser:-
http://www.blogger.com/

When the page opens click on the 'Create Your Blog Now' arrow

On the next screen choose a username and password. Write these down so you don't forget them. You'll be using them everytime you want to add to your site.

The second screen out of these 3 screens is where you choose the name of your site or blog. Make sure this is meaningful as to what your site is going to be about.

Then you need to type the name of your website.

Don't make it too long or else your address will end up something like http:/thenameyouchoose.blogspot.com .

Far better to choose something short like, 'fish'. Then your address will be http:/fish.blogspot.com . Much better isn't it. Later this is the address you'll use to get people to visit your site. So don't make it too long.

Finish by typing in the box the letters displayed on the screen.

The last screen is fun!

This is where you can choose your ready-made site.

Scroll down and select the page you like the best by clicking the one you want.

Don't worry if you change your mind later, you can. You can even change the colours or text already selected if you want to.
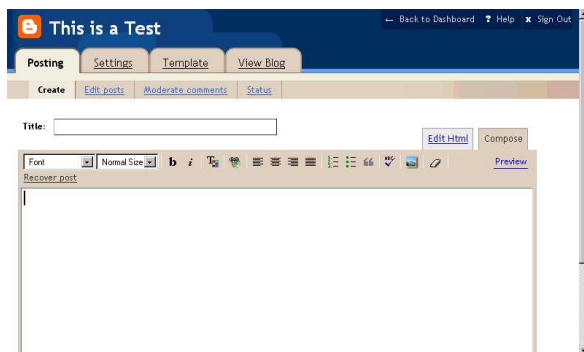

But don't worry too much how the site works. The whole purpose of this is to make an income from the internet.

When you pick what you want you're done.

The next screen will tell you 'Your blog has been created'. You'll see an arrow with the words START POSTING. Click this to add your first words.

Just to get the hang of it lets click it and have a look at the next screen.

You should be looking at a screen like this one...

This is great you can just simply type into it and add pictures and your all important affiliate addresses. For just to get use to it your going to type a short paragraph or too. Anything at

all. Don't worry anything you add to your site can easily be changed or deleted at any time.
So go on, have some fun getting used to it.

At the top you'll notice a menu.

Font
The 'Font' contains a short list of different ways to make your text look. When you select one of the fonts any text you type afterwards will look this way. The can change the font as many times as you wish.

If you want to change the font of text you've already typed first select it by clicking and dragging the mouse over the text. Then choose the new font from the list and hey presto it's changed.

Text Size
The next drop down list contains 5 different text sizes from Tiny to Huge. Change existing text or change for new text you're going to type. Just like you did with the Font option explained above.

Bold, Italic and Text Colour
If you position the mouse arrow over the top of these symbols it'll tell you what they're for. Again select for new text or select and change existing words.

Link
This is the one we'll be using later on to add our money-making affiliate links. You select some text that you want someone to be able to click to go to another site.

If you want to try it now then select a word or words. Then click the 'Link' button. You should see a box asking for a web address. It'll say 'Enter a URL:' In the box you'll notice to save time the first part is already in for you, 'http://'. Click to the right of this so that it doesn't have the blue highlight anymore. Else when you type it'll delete it and you'll have to type that part again.

Text Alignment
The next 4 are what makes your text align left, centre, right or a straight right edge all the way down.

Bullets and Numbers
The next two put bullets or number selected paragraphs or single sentences.

There's also a spell checker and a button that will allow you to add pictures to your page.

Anytime you want to see what it'll look like click the preview link. This appears just above the window where you type at the right hand side. It should be underlined. This will open a new window where you can see how it'll look. If there's something you want to change simply change it on the create post screen.

Go on! After typing a title and some text and maybe a picture click the 'preview' link.

When finished click publish blog button at the bottom of the screen.

When you click this button it makes the page viewable on the internet. As long as someone typed your site address into their browser. (Later I'll show you the best way of doing this.)

To view your finished addition to your site click the bit in brackets next to where it says 'View Blog'. Click where it says 'in a new window'.

If you want to add another post simply click the create tab on the left of the screen.

However, at this point lets look at the top right hand side of the screen. You'll notice it's got a link saying 'Back to Dashboard'. Click it...

This is the front screen where you can see different options. This is the first screen you'll see each time you log in.

Each time you want to add to your blog don't click 'Create Blog'. Not unless you want a completely new site on a different subject.

To add a bit more to your site you'll see to the right of the name of your blog a green cross under the heading saying NEW POST. Click this to add to your site each time you visit.

This will bring up the typing box again. Where you can write words, add pictures and later where you'll add affiliate links. Your money earners.

So there you have it. You have now got your own site for free. And no technical knowledge is needed.

Each time you want to add to your site, log in with your username and password. Then next to your blog name click the green cross to add a new post.

Ok, ready to find some money making links to add to your site? Ok, come on then...

[CURIOUS ABOUT PAID SURVEYS?](#)

I've been taking paid surveys from home for about 5 years. It's NOT a way to get rich or make an income-- but if you like giving your opinion it's a fun, easy, legitimate way to earn a little cash from home (as well as other goodies like DVDS and gift cards.). Still curious? On my site I have reviews of free paid survey programs I've participated in, as well as tips on [how to avoid survey scams](#).

Chapter 4
Finding those keys to income
- Affiliate Programs

This part is quite simple.

All depends on what you've decided write about on your new website. But say for instance your passion is on fly fishing. So what you want is sites selling items related to what your site is all about.
Examples of sites could be suppliers of...

fishing tackle

books on fly fishing

fishing holidays

Or let's say your passion is computers...

Examples of sites could be suppliers of...

computers

printers

scanners

web cams
hardware

software

accessories such as printer ink

books on computers

So here is what you do. Go to Google and type in something like...

"fishing tackle" affiliate

"fly fishing" books affiliate

"fishing holidays" affiliate

Notice how in each example the word 'affiliate' is included. This is to save time and will only bring up pages where you'll find the link to join their affiliate program.
Or for computers you may search using...

computers affiliate

printers affiliate

scanners affiliate

"web cams" affiliate

hardware affiliate

software affiliate

computing books affiliate

and so on.

So what do you do when you get loads of results coming up. Which you will.

Well go to each of the pages and if you think the products sold are good quality (Something you'd recommend

to a friend.) then look on the page for affiliate or affiliate program. Quite often this is found right at the bottom of the page.

Click the link and you'll find their instructions of how to join. It should be free. You'll get an address to their website that is unique to you only. When people visit their site by clicking this link they'll know you're responsible for the visitor. If they then buy something you'll receive commission.

Before joining an affiliate program be sure to check whether they offer enough commission to make it worth your while. If they don't then simply move unto another site. You should find most affiliates will offer anything

from 40% upwards of each sale made.

When you get your unique address you need to copy and save it on your computer. What I do is keep a notepad where I jot down what the products are, what's good about them and the unique affiliate address.

Here is an example...

The Millionaire Idea - An ebook written by a self-made internet millionaire showing the easy plan he used.
http://www.millionaire.com/24397

The reason for this is you would probably want to keep mentioning their site more than once on your site.

So, go on have some fun and search now to see just how many sites are selling stuff you can recommend and will pay you in return. But for now just take a look don't start joining any programs yet. The reason is that when you understand the next chapter about the wording.

This chapter will explain the SPECIAL way you should mention your affiliate links. Also you'll know what you'll be doing each day. You'll enjoy it, it's fun and doesn't take long.

Chapter 5
The wording that makes you money

The words of what you say can influence whether people act or not. A professor of persuasive psychology in America has appeared on interviews and has written a book about 6 simple principles. These six principles he found to influence people to do things without thinking. Very interesting, and I've used them to great success. You can get a copy of his book at http://www.persuasion.com/13471 Were you tempted to click the link above? If you were, then it worked.

This is just an example. But do you see how I simply mentioned what it was about and the benefits. Plus if you've personally benefited mention that as well. When you write in your web site, you should imagine you are just writing for your friend or friends. That way you'll come over as a friend mentioning something that they would be interested in.

Very powerful! Try it.

Here's another example...

When I was searching the web today I've found a site where you can buy Lexmark ink cartridges for only £7.50 each. Half the price as normal. When I ordered some they came the next day. The site is called http://www.cheapink.com/14314

See it! All I did is find a site selling cheap ink and told other people about it. Simple isn't it?

So now I'm going to show you how you do the business.

You don't just have short paragraphs recommending websites. If you do people will just find your site boring. If it's boring they won't recommend their friends and it's unlikely that they'll return.

What you need to do each time, preferably each day, is give valuable information and tips from what you know and what you discover in the future.

So is your site is about beauty. Then you would write tips that others will find useful. However, during your information you will tell readers about where they can find a beneficial site.

I'm no expert on beauty, but you may one day write something like this...

A good diet is better than all the products available for glowing young looking skin. Although there's nothing wrong with having the odd chip meal it shouldn't be a regular thing.

Instead eat plenty of fresh vegetables, fresh fruit, fish and try to drink herb tea or juices instead of tea and coffee. An excellent book I use to keep me eating healthy is called "The Beauty Diet" by doctor Rosalind McArthur. I

bought it cheaply from
http://beautybooks.com/24349

Also a good tip is to take a vitamin and mineral supplement. However, don't make the mistake that you need to buy expensive megadose products. A cheaper, smaller dose containing all the essentials in the right balance really does make a difference to your skin. The brand I use is called "24 Essentials" available at
http://vitsup.co.uk/24387

etc, etc.

Now I typed the above example in 2-3 minutes only.

So to summarise...
You look around the internet for affiliate programs for products that are

of interest to people with the same interest.

Then you write useful information on your site and tell them where they can find excellent products. Using, of course, your unique affiliate web address when you joined their program.

There you have it. As simple as 1-2-3.

The longer you continue adding to your site the more information for readers will be there and also more affiliate links to site willing to pay you handsomely.

So next you need to get people to know about your site and visit it. Turn to the next chapter when you've added some useful information to your site.

Chapter 6
THE best free way to get people to your site

I'm now going to tell you about one of the best free ways to get people to visit your site.

The method is using free articles.

Even just writing one short article of interest to readers will have them visiting your site. Lots of internet professionals know the power of this method. To prove it go unto the internet and type "article".

You'll be faced with millions of results. If you read some of them you'll notice that at the bottom of each one is a short paragraph mentioning the authors web site.

You can do the same and it won't cost you a thing. Except the time it takes the to write it.

The beauty of articles is that when you put yours on a few article sites others are allowed to put them on their sites as long as they don't alter anything. This means that others will start spreading your article.

When your article appears all over the place then many people will read it and hopefully click your link at the bottom and visit your site.

You shouldn't be stuck at what to write as you already should know a lot about your favourite subject.

You could use some of what you've already written on your site. But don't include the affiliate links. A lot of article sites don't allow web links in the article you place.

When you write the article you'll need a title for your article and the short paragraph recommending your site to appear at the bottom.

When choosing a title try to include key words that someone is likely to type in the Google search box. That way they should find your article and then hopefully visit your site.

The best way to see how it's done is to search and read as many articles about your subject. Try to see how they word the recommendation to visit their site at the bottom. However, don't copy other peoples articles or they could sue you for breach of copyright. A very serious offence.

Write your own words but just learn how these seasoned pros word there final paragraph.

The short paragraph recommending your site is called the "bio".

When you've written your article you need to find sites where you can put it. The way I did it is type words about my subject along with the words 'article' 'submit'. This brings up a list of site that want you to post your

article on their site. Try to post to as many sites as you can.

If you can write more articles using different keywords in each title you'll notice a massive increase in site visitors.

This is because people search on the web using different keywords. Each time your title includes these words one of your articles recommending your site will come up.

If you want an excellent method of writing articles quickly and easily there is an easy method available on the web. It's the quickest best way I know to write short articles. I have one ready in usually 10-15 minutes.

This will allow you to produce many articles with different titles in a very short time. Search on Google for "Write Interesting Internet Marketing Articles In 7 Easy Questions".

It'll also help you quickly write information for your new web site business.

Another even more effective method

Advertise by a viral marketing ebook.

Here is a brilliant free ebook for you to read. No email signup needed, just click and download. You'll be amazed. Click
http://tinyurl.com/2qgw2x

Either write your own or you can advertise in my next one. Submitted to over 10,000 people who will sell it on to others. Every is allowed to sell it on. Which gives it the viral aspect. Reach 100s of thousands in fast. Visit
